

Kushal Gupta

Fullstack Developer | Python | React | AI/LLM

Vartaknagar, Thane, Maharashtra 400606 | 9890938795 | kushalguptait@gmail.com | linkedin.com/in/kushal-gupta-77949118a

Certificate: verify.skilljar.com/c/xw9p73vgu7jk

Fullstack developer with 4+ years building scalable applications and APIs - Python backend and React frontend, with production systems serving 50,000+ users at LTIMindtree. Expanding into AI/LLM application development and agent workflows.

EXPERIENCE

LTIMindtree

May 2022 - Present

Software Engineer | Thane, Maharashtra

- Designed and shipped high-throughput report download API in Python serving 50,000+ customers - key consumer-facing fullstack deliverable.
- Built RESTful APIs for Last Sale Date and Event Management using Python - clean layered architecture; cut decision-making time by 40%.
- Implemented server-side pagination, sorting, and search in Python - 18% page load improvement at scale.
- Refactored Oracle DB SQL - eliminated N+1 patterns, restructured indexes; reduced application load time by 46%.
- Architected event-driven notification microservice in Python for real-time email alerts - reduced issue resolution time by 30%.
- Enforced auth/encryption compliance; led team access control via ServiceNow - reduced system downtime by 20%.

Labco Science, Inc.

September 2020 - December 2020

Full Stack Developer Intern | Remote

- Developed a CRM for Labco Inc. with a Sales Module including creation of a new lead, converting it into opportunity and taking the process all the way to sale and generation of invoice.
- Modules for task scheduler and calendar, taking notes and to-do lists etc and also send emails from inside of the app.
- Modules for uploading files as storage and extracting data for database and exporting database and also for activity log and a personal assistant.

PROJECTS

OMkaksha | [Visit Live Site ->](#)

January 2021

- Developed an website with my brother for GRE prep, where candidates can give tests and prepare for free.

luxidevilott | [Visit Live Site ->](#)

November 2025

- As a fun project where I hosted my Gmail with 200+ domains, so that people can access temporary emails.

AI Brain | [View on GitHub](#)

April 2026

- Built a self-hosted memory API that gives AI agents persistent memory across sessions - storing messages, planning/thinking steps, actions, and logs in MongoDB, with a React dashboard that visualizes a timeline of all agent activity.
- Designed the system around a 'Brain' (master token for full access) and namespaced 'Thoughts' (per-project keys), so every agent project gets isolated memory plus a scoped secrets vault for API keys and credentials.
- Exposed a single sync endpoint to persist everything an agent produces in one call, and a context-recall endpoint that replays a chronological timeline to inject past context into new sessions.

TECHNICAL SKILLS

Languages: Python, JavaScript, Golang, SQL

Frontend: React.js, component architecture, responsive UI, REST API integration

Backend & APIs: Python, Django, REST API design, microservices, event-driven architecture

AI / LLM: LLM application development, agent workflows, LangChain patterns, Gemini / Claude APIs

Databases & Tools: PostgreSQL, Oracle DB, SQL optimisation (N+1, indexing), VS Code, Git

EDUCATION

Bachelor of Engineering in Information Technology

2018 - 2022

RCOEM, Nagpur, Maharashtra
